

Verdezyne Corporate Fact Sheet

www.verdezyne.com

Profile: Verdezyne is an industrial biotechnology company directing the power of biology to create bio-based processes that meet global needs for clean and sustainable fuels and chemicals.

Verdezyne applies its biological expertise and proprietary technologies to design and engineer enzymes, metabolic pathways and microorganisms that produce target chemicals. Metabolic pathways are optimized using combinatorial assembly of gene variants coupled with biological selection of the most productive combination.

The petrochemical industry is looking to shift up to 20% of its feedstock need towards renewable, cost-effective sources. Verdezyne is addressing this need by improving the productivity of existing fermentation processes, developing renewable petrochemical replacements and designing novel chemicals for new applications. These solutions provide green market differentiation combined with a compelling cost advantage over petroleum-based products.

Ownership: Founded in 2005, Verdezyne is a privately held company backed by OVP Venture Partners, Monitor Ventures, Tech Coast Angels, and Life Science Angels.

Management: E. William Radany, Ph.D.	President and Chief Executive Officer
Stephen Picataggio, Ph.D.	Chief Scientific Officer
Steve Jackson	Chief Financial Officer
Nancy Oleski, Ph.D., JD	Senior Vice President, General Counsel
Damien Perriman	Vice President, Business Development

Prior Clients: Include Novozymes, Syngenta and Genencor
